

The Eco Lunch Scanner Guide!

1. What is the Eco Lunch Scanner?

Welcome to the Eco Lunch Scanner!

Have you ever wondered how much water it takes to grow an apple? Or how much carbon gas is released to make a pizza?

This fun app uses smart Artificial Intelligence (AI) to look at your food and tell you exactly how it impacts our beautiful planet Earth!

2. How to use the Scanner

Using the app is as easy as 1, 2, 3:

Step 1: Open the 'Scanner Mode' in the app.

Step 2: Hold your food up to the camera (like an Apple or a Banana).

Step 3: Click the 'Take Photo' button.

The AI will think for a second and then tell you what it sees!

3. What do the scores mean?

When you scan a food, you get a special scorecard:

* Water Usage (Drops): This shows how many liters of water were needed to grow or make your food. Less water means a happier planet!

* Carbon Footprint (Clouds): This is how much invisible gas went into the air during farming and transport. A lower number is better for the climate!

The Eco Lunch Scanner Guide!

* Eco Score (0 to 100): This is the final grade! 100 means the food is SUPER good for the Earth. If the score is low, it means that food takes a lot of resources to make.

4. Be an Eco-Hero!

By learning about your food, you are taking the first step to becoming a true Earth Hero! Try to eat more foods with a High Eco Score (like Apples and Salads) to help save water and protect nature.

Have fun scanning your lunch!
